Partners in Education

Recruiting opportunity

Infor® uncovered the need of Infor-ready implementation junior consultants who have a working knowledge of Infor products, industry focus and methodologies. There is a need for approximately 3,500 hires over the next 3 years for Infor and our partners. In order to fulfill this demand, the Infor Education Alliance Program (EAP) is partnering with institutions to cultivate this much-needed talent—but we need your help. Become a Partner in Education member with the EAP, and you'll get the tools you need to hire industry-ready graduates from Infor's Implementation Consultant Course.

In the next year, we estimate to have **50+ grads in the summer of 2017** and **200+ grads in the fall of 2017 and winter of 2018**.

Partner with the EAP to recruit entry-level talent

- Cut costs around recruiting fees.
- Alleviate anxiousness around talent's lack of product and industry knowledge.
- Decrease the amount of time it takes to onboard and train employees.
- Hire cost-effective talent.
- Hand pick talent at exclusive recruiting events at Infor's New York City headquarters.

Hire from our Infor-ready talent pipeline

So, why should you become a Partner in Education? In 2014, the average US organization spent approximately 21% of a candidate's total first year annual earnings to help source and recruit experienced talent.¹ Costs for recruiting do not include extended vacancies, lack of product/industry knowledge, and crippling bad hire decisions. You can eliminate all that when you partner with the Infor Education Alliance Program.

Infor will be partnering with institutions and organizations to launch an **Infor CloudSuite™ Industrial (SyteLine)** and **Infor CloudSuite™ Business** implementation practical experience course, where students learn the cross-industry applicable skills they need to pursue successful careers as ERP Associate Implementation Consultants. The training focuses on three areas:

- Technical training
- Enablement training
- Professional training (employability skills)

After finishing the course, graduates will be able to complete the following tasks for your organization and your clients:

- Participate in full life cycle client implementation projects relating to Infor applications, working as part of an Infor Project team.
- Assist with the information gathering and design process for a client implementation, including the development of functional business requirements and solution scope documents.
- Understand how to configure a client business solution, as well as build and test scenarios.
- Document and conduct functional training to client end users.
- Evaluate success and follow-up with client to ensure project objectives are being met.
- Document business process and objectives for clients.

Ready to commit?

Submit an email expressing your interest, including the number of hires and preferred hiring timeframe:
